The hub containing the bearing should not allow the wheel to wiggle back and forth. If it does, chances of having a bag wheel bearing are high. Rear Differential Noise If a bearing is failing inside the differential the noise is virtually the same as the one created by a failing wheel bearing making it hard to isolate.

There were two of these trannys - 097 used in the 1991 Audi 100, and in the 1991-1995 Audi 90. This is a jerky and crappy tranny that you wouldn't want to use anyway. Then there is the 4 speed used in the 1992-1997 Audi 100/A6. That tranny is a ZF 4HP18 and is good, but is totally unrelated to the VW/Audi 3 speed. David
