It puts out 42psi boost. I can't imagine a 1KD-FTV holding up to that for long. Tuning such a system will be a nightmare, but the results fantastic. In the lower power 530D (130kw vs 160kw, 400Nm vs 500) they used a single variable vane turbo, I think a GT2256 or similar.

The signal to lower the boost pressure went to the stepper motor driver/ecu before we even got to the 224kpa level (its threshold is lower than 224 kpa) so its already busy lowering the boost. This negates the risk of overboost damaging the engine or the turbo by telling the ecu the boost is lower than it actually is.

D4d turbo actuator problem - 4x4 Community Forum

The turbo fitted to the 1KD is a variable vane design, which is controlled by an external turbo actuator stepper motor rather than a traditional dump valve and pneumatic wastegate. The stepper motor controls the angle of the turbo vanes that dictates boost levels.
