Segmented worm such as the leech or earthworm crossword clue

Earthworms are segmented worms. Segmented worms are in the phylum Annelida, which has over 22,000 known species. These worms are known as the segmented worms because their bodies are segmented, or separated into repeating units. Besides the earthworm, the segmented worms also include leeches and some marine worms.

Segmented Worms

1. Segmented Body Earthworms are classified in the phylum Annelida or Annelids. Annelida in Latin means, "little rings." The body of the earthworm is segmented which looks like many little rings joined or fused together. The earthworm is made of about 100-150 segments. The segmented body parts provide important structural functions.

Earthworms - University of Pennsylvania

Segmented worms, though small, are more highly evolved than even slugs and snails. Segmented worms belong to the phylum Annelida, a group of soft-sided animals that have symmetrical right and left sides. There are over 12,000 known species in the Annelida family, grouped into three categories: oligochaetes (earthworms and freshwater worms), hirudineans (leeches), and polychaetes (marine worms).
