Therefore, a harmonic function admits a conjugated harmonic function if and only if the holomorphic function $(\cdot) := (\cdot) - i(\cdot)$ has a primitive in \mathbb{C} , in which case a conjugate of u is, of course, v . So any harmonic function always admits a conjugate function

This ecumenical character of A First Course in Harmonic Analysis is particularly noteworthy in light of the evocative fact that harmonic analysis, or, more precisely, the theory of unitary group representations in a Hilbert space, has shown itself to be a unifying theme par excellence connecting such apparently disparate disciplines as number theory, physics, and probability
