In contrast, affective neuroscience focuses on the evolutionary origins of causal and functional mechanisms in the affective brain. Affective neuroscience provides evidence that there are a set of basic affective mechanisms in subcortical regions that underlie a diverse range of behaviours and internal experiences.

The Philosophical Implications of Affective Neuroscience

The Affective Neuroscience 3 strategy relies on preclinical evidence for the existence of a variety of primary-process emotional networks in mammalian brains. These networks are identified by distinct emotional behaviors evoked with highly localized electrical stimulation of the brain (ESB) sites which exist almost exclusively in subcortical regions.
