Solutions to polynomial functions may be either real or complex. By analyzing the structure of a polynomial function represented as a table, equation, or graph, you can determine efficient methods and procedures to finding solutions, features, and alternative representations of polynomial functions.

When two polynomials are divided it is called a rational expression. In such cases you must be careful that the denominator does not equal zero. Division by zero is not defined and thus x may not have a value that allows the denominator to become zero. Otherwise, any other value may be
