Intuition is the native windowing system and user interface (UI) engine of AmigaOS.It was developed almost entirely by RJ Mical. Intuition should not be confused with Workbench, the AmigaOS spatial file manager, which relies on Intuition for handling windows and input events.. Intuition is the internal widget and graphics system. It is not implemented primarily as an application-managed ...

Autoconfig is an auto-configuration protocol of Amiga computers which is intended to automatically assign resources to expansion devices without the need for jumper settings. It is analogous to PCI configuration.. AutoConfig is integrated within the Amiga's Kickstart firmware, usually stored in ROM.When the system is switched on, AmigaOS interrogates each expansion device in turn and assigns ...

Autoconfig - Wikipedia

The Amiga 4000 motherboard includes a non-functional jumper that anticipated later chips and is labeled for 8 MiB of Chip RAM—regardless of its position, the system only recognizes 2 MiB due to the limitations of the Alice chip. However, the software emulator UAE can emulate an Amiga system with the design limit of up to 8 MiB of Chip RAM.
