Temporomandibular joint imaging. | Radiology

Diagnostic Imaging of the Temporomandibular Joint (TMJ)
Radiographic evaluation is very helpful in the diagnostic process and cone beam CT technology makes accessibility to low cost, low radiation CT scans. Magnetic resonance imaging (MRI) is one of the best diagnostic tools for identification of TMJ pathology, allowing evaluation of TMJ disc position, morphology, mobility, extent of joint degenerative changes, inflammation, and presence of connective tissue/autoimmune diseases.
