## **Colloid Suspension Solution Examples**

These particles range in size from  $10^{-8}$  to  $10^{-6}$  m in size and are termed colloidal particles or colloids. The mixture they form is called a colloidal dispersion. A colloidal dispersion consists of colloids in a dispersing medium. Example: Milk.

## Suspension? Examples of Colloidal ...

There are two parts to every colloid mixture: the particles and the dispersing medium. The colloid particles are solids or liquids that are suspended in the medium. These particles are larger than molecules, distinguishing a colloid from a solution. However, the particles in a colloid are smaller

Butter and mayonnaise are examples of a class of colloids called emulsions. An emulsion is a colloidal dispersion of a liquid in either a liquid or a solid. A stable emulsion requires an emulsifying agent to be present. Mayonnaise is made in part of oil and vinegar.

# Read PDF Colloid Suspension

A colloid is intermediate between a solution and a suspension. While a suspension will separate out a colloid will not. Colloids can be distinguished from solutions using the Tyndall effect. Light passing through a colloidal dispersion, such as smoky or foggy air, will be reflected by the larger particles and the light beam will be visible.

## **Solutions, Suspensions, Colloids -- Summary Table**

The different types of colloidal solution are:

Aerosols: Solid or liquid mixed with gas;

Example: fog (liquid in gas) Sols: Solid mixed with liquid; Example:

Paint; Emulsion: Liquid with liquid; Example:

oil and water; Gel: liquid in solid;

Example: Fruit jelly;
