The G1 and G2 work with any Contax TLA flash. The two below just happen to be teeny flashes in titanium styled to match the Contax G system. The G1 and G2 have full TTL flash control. Contax claims perfect fill-flash exposure, but don't believe them. If you want fill-flash, I suggest calculating it manually, since the G2 and G2 just dumbly add ...

Cura generates a gcode file from the stl. Then you shove that on an SD card and stick that in the front of the machine and it reads it. stl file is a 3d mesh. Cura slices a solid representation of that mesh and turns that into movements for the machine to make (gcode). The printer just runs the gcode program.

The successor to the G1, the Contax G2, has improved autofocus performance and a series of new features and ergonomic enhancements. The manual focus wheel was moved from the top deck to the front, to about the same position as where the focusing wheel was located on classic Dresden and Stuttgart Contax rangefinders. The G2 also has two AF modes - continuous, which constantly adjusts focus as the ...

Most people look at the extension of a file and then guess the type of file from that extension. For example, when you see a file with an extension of gif, jpg, bmp, or png you think of an image file, and when you see a file with an extension of zip, you assume the file has been compressed using a

zip compression utility.

Determine a File Type Using the 'file' Linux Command

The file type is commonly determined by the filename extension. For example, the .docx files may be associated with Microsoft Word. A single file extension might have more than one association for performing different actions.
