Functions Chief Harris, The guilty verdict is Ben. In Clue 1, I knew I needed to find the GCF of the three monomials given. By finding the coefficient of each monomial, the value of  $s$  would then be revealed. After finding most of the factors of the three monomials there was one value that was the GCF.

Purplemath. A "hard" quadratic is one whose leading coefficient (that is, whose numerical value on the  $x^2$  term) is something other than a nice, well-behaved 1. To factor a "hard" quadratic, we have to handle all three coefficients, not just the two we handled in the "easy" case, because the leading

A quadratic equation is an equation of the form  $ax^2 + bx + c = 0$ , where  $a \neq 0$ , and  $a$ ,  $b$ , and  $c$  are real numbers.

Solving Quadratic Equations by Factoring . We can often factor a quadratic equation into the product of two binomials. We are then left with an equation of the form  $(x + d)(x + e) = 0$ , where  $d$  and  $e$  are integers.
