International Conference on Differential Geometric Methods in Theoretical Physics are congresses held every few years on the subject of Differential geometric methods in Theoretical physics. Lectures, seminars, and discussions are held in different universities throughout the world, every few years, and a book compilation is published thereafter consisting of the papers submitted and discussed at the conference.

Many of the key concepts and results of statistical inference (cf. also Statistics) can be expressed efficiently in terms of differential geometry. Such re-expressions have been helpful both in illuminating classical statistical procedures and in developing new methodology. The role which differential geometry can play in statistical theory has been realized effectively only since the late 1970s.
