Pulling the stick to the rear, behind the center, will make the drone descend. Making the drone go up and down is as simple as adding or subtracting power. For maneuvering, a drone uses differential thrust. If your drone is in a stable hover and you want to go forward, you push the right stick forward.

## **How to Fly a Drone for Beginners - An Easy Tutorial ...**

Unmanned Aerial Vehicle, or UAV, is the term most commonly used today to describe what the world has come to know as drones. UAVs can be controlled using a milieu of high-tech communication protocols like GPS and other satellite communications. UAVs can be remotely piloted by a human, team of humans, or a computerized piloting system.

## **What Are Drones? - dummies**

If you want to fly drones specifically because you're interested in aerial photography or videography, the 818 Hornet is the best choice for you. This excellent beginner drone is much more stable than the AA108 thanks to its heavier build and shape, so it

...

If you plan to fly a drone, you need to understand how it is controlled. For an object that is heavier-than-air to get airborne, you must create lift. Lift is a force that pushes an object upward into the air and is created by varying the air pressure above and below an aircraft. Airplanes create lift by moving air above and below a wing.

## **Drones For Dummies by Mark LaFay, Paperback | Barnes & Noble®**

I read quite a few "For dummies" books and unfortunately this has been one of the most disappointing ones. I expected that after reading the book I would have a basic understanding on how a drone works, an insight on its components, dynamics and the general knowledge on how to operate a drone at a basic level or maybe even how to proceed in case I would like to build my own.
