Cattle & Cattle Egret. With your group, choose one of the organism pairs from Model 2 and justify why you categorized the relationship as you did. The one we choose was the Dog & Flea. The reason why we choose Parasitism for it was because parasitism means one organism benefits and the other is harmed. The Dog gets infections & rashes from the Flea, while the Flea gets what it needs, so in the end, the Dog is getting harmed in the process.

Ecological Relationships POGIL Flashcards | Quizlet

mutualism —a symbiotic relationship where both organisms benefit. commensalism —a symbiotic relationship where one organism benefits and one does not benefit but is unharmed. parasitism —a symbiotic relationship where one organism benefits and one is harmed. 2. Build background about National Geographic Crittercam.

Analyzing Ecological Relationships. 1) the zebras come in after it rains. 2) the wildebeest comes in after the zebra. 3) the Thomson gazelle is the last to come in. 4) they all appear at different times. 5) during the raining season the population for the zebras and the gazelle grow but for the wildebeest the population is low.

Analyzing Ecological Relationships | haydenm605

All living organisms need each other in some way to survive. This can include the interactions between predators and their prey, the close associations between and among living things (symbiosis), or the competitive relationships between and among species. All of these relationships may be equally advantageous to the parties involved, or they may be more beneficial to one organism over the other.
