...

In chemistry a solution is actually a type of mixture. A solution is a mixture that is the same or uniform throughout. Think of the example of salt water. This is also called a "homogenous mixture."

## **Chemistry for Kids: Chemical Mixtures**

Solutions are groups of molecules that are mixed and evenly distributed in a system. Scientists say that solutions are homogenous systems. Everything in a solution is evenly spread out and thoroughly mixed. Heterogeneous mixtures have a little more of one thing (higher concentration) in one part of the system when compared to another.

## **Chem4Kids.com: Matter: Solutions**

A good example is a mixture of oil and water. Chemical solutions are usually homogeneous mixtures. The exception would be solutions that contain another phase of matter. For example, you can make a homogeneous solution of sugar and water, but if there are crystals in the solution, it becomes a heterogeneous mixture.

## **10 Heterogeneous and Homogeneous Mixtures**

Read about mixtures and solutions using your science textbook or from Mixtures and Solutions. Define mixture and solution. Talk about the important parts of each, like a mixture has two or more materials with different properties. A solution, on the other hand, is a type of mixture that is formed when one material dissolves into another.
