ESPEN Guidelines on Parenteral Nutrition: Intensive care ESPEN Guidelines on Parenteral Nutrition: non-surgical oncology. Parenteral nutrition offers the possibility of increasing or ensuring nutrient intake in patients in whom normal food intake is inadequate and enteral nutrition is not feasible, is contraindicated or is not accepted by the patient. These guidelines are intended to provide evidence-based recommendati....

ESPEN Guidelines on Parenteral Nutrition: non-surgical ... Postoperative parenteral nutrition is recommended in patients who cannot meet their caloric require- ments within 7–10 days orally or enterally. In patients who require postoperative artificial nutrition, enteral feeding or a combination of enteral and supplementary parenteral feeding is the first choice.

ESPEN Guidelines on Parenteral Nutrition: Surgery
Complementary to the ESPEN guideline on enteral nutrition of
liver disease (LD) patients the present guideline is intended to
give evidence-based recommendations for the use of PN in LD.
For this purpose three paradigm conditions of LD were chosen:
alcoholic steatohepatitis (ASH), liver cirrhosis and acute liver

ESPEN Guidelines on Parenteral Nutrition: Hepatology Preliminary remarks The present guidelines address the indications for parenteral nutrition (PN) in renal patients with

failure.

malnutrition in a similar way

tothepreviouslypublishedguidelinesonenteralnutrition(EN).1As mentioned in these EN guidelines, patients with renal failure represent a heterogeneous group and their nutritional requirements vary according to the clinical setting.

ESPEN Guidelines on Parenteral Nutrition: Adult Renal Failure

For parenteral nutrition, the ideal position of the catheter tip is between the lower third of the superior cava vein and the upper third of the right atrium; this should preferably be checked during the procedure. Catheter-related bloodstream infection is an important and still too common complication of parenteral nutrition.
