Occupational stress is psychological stress related to one's job. Occupational stress refers to a chronic condition. Occupational stress can be managed by understanding what the stressful conditions at work are and taking steps to remediate those conditions. Occupational stress can occur when workers do not feel supported by supervisors or coworkers, feel as if they have little control over ...

Occupational stress - Wikipedia

The stress interval can be defined as starting at the time of stress imposition (T 1) until the endpoint of the experiment (T 2, see Fig. 1). Measurements of the difference in growth reduction between control and stress treatments will be more accurate and usually greater when biomass increases are analysed only during the stress interval (T 1 ...

The northern blot, or RNA blot, is a technique used in molecular biology research to study gene expression by detection of RNA (or isolated mRNA) in a sample.. With northern blotting it is possible to observe cellular control over structure and function by determining the particular gene expression rates during differentiation and morphogenesis, as well as in abnormal or diseased conditions.

Northern blot - Wikipedia

Workplace stress carries considerable costs for the employees' wellbeing and for the organization's performance. Recent studies demonstrate that perceptions of psychological contract breach are a source of stress for employees. That is, when employees notice that their employer does not fulfil certain obligations, they will perceive that certain resources are threatened or lost, which in ...

Mental imagery (varieties of which are sometimes colloquially referred to as "visualizing," "seeing in the mind's eye," "hearing in the head," "imagining the feel of," etc.) is quasi-perceptual experience; it resembles perceptual experience, but occurs in the absence of the appropriate external stimuli. It is also generally understood to bear intentionality (i.e., mental images ...

However, more recently, a significant body of statistical, anecdotal and experimental evidence has pointed towards other causes of death on immersion. For example, in 1977 a Home Office Report revealed that ~55% of the annual open water deaths in the UK occurred within 3 m of a safe refuge (42% within 2 m), and two-thirds of those who died ...

As Bernard Williams (1973, 1985; cf. Flanagan 1991) forcefully argued, an ethical conception that commends relationships, commitments, or life projects that are at odds with the sorts of attachments that can be reasonably expected to take root in and vivify actual human lives is an ethical conception with—at best—a very tenuous claim to our ...
