If you are factoring a quadratic like  $x^2 + 5x + 4$  you want to find two numbers that Add up to 5 Multiply together to get 4 Since 1 and 4 add up to 5 and multiply together to get 4, we can factor it like:  $(x+1)(x+4)$  Current calculator limitations. Doesn't support multivariable expressions ...

### Factoring Calculator - MathPapa

FACTORS. A factor is a number that divides into another number with no remainder. In other words every number is divisible by each of its factors. 1 is a factor of every whole number, because every integer is divisible by one. Examples. 3 and 7 are both factors of 21 because  $3 \times 7 = 21$ . 10 and 6 are both factors of 60 because  $10 \times 6 = 60$
