analysis of acids and bases; through this process, an acid or base of known concentration neutralizes an acid or base of unknown concentration. The titration progress can be monitored by visual indicators, pH electrodes, or both. The reaction's equivalence point is the point at which the titrant has exactly neutralized the acid or base in the

acid with a base is shown in : Figure %:
A titration setup We use this
instrumentation to calculate the amount
of unknown acid in the receiving flask by
measuring the amount of base, or
titrant, it takes to neutralize the acid.

Read Online John Erickson Acid Base Titrations Solutions

The simplest acid-base reactions are those of a strong acid with a strong base. Table 4 shows data for the titration of a 25.0-mL sample of 0.100 M hydrochloric acid with 0.100 M sodium hydroxide. The values of the pH measured after successive additions of small amounts of NaOH are listed in the first column of this table, and are
