A MagnaPLUS generator is simple to trouble shoot with 6 main components: the exciter stator and exciter rotor windings, a voltage regulator, a rectifier assembly, and the main stator and rotor windings. For tools you will need a good multi-meter - a Fluke works very well - a ratchet set, and a set of screwdrivers.

Marathon Generators

Start and run the generator at no load and rated speed. The generator voltage should build up to a minimum level. (Actual level is dependent upon connection). If it does not build up, refer to field flashing section in generator manual. Slowly adjust the voltage control until the alternator voltage reaches the nominal value.
