To make a master server. In Object Explorer, connect to an instance of the Microsoft SQL Server Database Engine, and then expand that instance. Right-click SQL Server Agent, point to Multi Server Administration, and then click Make this a Master. The Master Server Wizard guides you through the process of making a master server and adding target servers.

Make a Master Server - SQL Server Agent | Microsoft Docs

In SQL Server, system objects are no longer stored in the master database; instead, they are stored in the Resource database. Also, master is the database that records the existence of all other databases and the location of those database files and records the initialization information for SQL Server.

master Database - SQL Server | Microsoft Docs

The master key must be open and, therefore, decrypted before it is backed up. If it is encrypted with the service master key, the master key does not have to be explicitly opened; however, if the master key is encrypted only with a password, it must be explicitly opened. We recommend that you back up the master key as soon as it is created, and store the backup in a secure, off-site location. Security Permissions. Requires CONTROL permission on the database.

Back Up the Service Master Key - SQL Server | Microsoft Docs

What's New in Master Data Services in SQL Server 2012 RC0 ...

An improvement in SQL Server 2012 is the facilitation of exporting the data via subscription views. So back on the home page of Master Data Manager, here under Integration Management, I am going to define a subscription view that allows us to retrieve the Reseller information. And this could be of use for example by Integration Services for populating a reseller dimension table in the data warehouse.
