Mitosis Notes Cell division occurs in a series of stages, or phases.

- Chromatids (or pairs of chromosomes) separate and begin to move to opposite ends of the cell
- Chromatids (or pairs of chromosomes) attach to the spindle fibers
- Chromosomes are copied (# doubles)
- Chromosomes appear as threadlike coils (chromatin)

Mitosis Notes. Cell division occurs in a series of stages, or phases. 1st: INTERPHASE. • Chromosomes are copied (# doubles) • Chromosomes appear as threadlike coils (chromatin) at the start, but each chromosome and its copy (sister chromosome) change to sister chromatids at Sister chromatids end of this phase Centromere.

Mitosis Notes. In most cases living things grow by _____. There are 2 reasons cells divide rather than continuing to grow: DNA Overload: The larger the cell becomes, the _____ the cell places on its DNA.

Mitosis is the phase of the cell cycle where the nucleus of a cell is divided into two nuclei with an equal amount of genetic material in both the daughter nuclei. It succeeds the G2 phase and is succeeded by cytoplasmic division after the separation of the nucleus.

Mitosis (Definition, Diagram & Stages Of Mitosis)

the centromeres split, pulled apart, by the spindle fibers, separating the sister chromatids, chromosomes move to opposite sides of cells. Telophase. final phase of mitosis, chromosomes relax to chromatin, spindle fibers breaks down, nuclear membrane forms, nucleolus becomes visible.

What is MITOSIS? Mitosis is the process in which one cell DIVIDES to make two new cells; Each cell has the SAME genetic material as the original cell; Its like "photocopying" the cell- They are IDENTICAL; Genetic Information. Genetic information is contained in the DNA of the cell; DNA is found in long fibers called CHROMATIN

The Cell Cycle - Mitosis PowerPoint (Editable) by Miss ...

The process of mitosis occurs in four stages: prophase, metaphase; anaphase and telophase. Cytokinesis differs in plant and animal cells. In animal cells the cytoplasm invaginates and

divides the cell in two, and in a plant cell the cell is divided in two by the cell plate which forms the cell wall. Mitosis ensures growth of tissues and organisms.
