CEC is an Industry-based organisation which develops Test Methods for the performance testing of Automotive Engine Oil, Fuels & Transmission Fluids (using gasoline & diesel engines). In addition, it covers Marine & Large Engine Oils, Two-stroke Engine Oils & Associated Bench Tests. It maintains existing tests on an ongoing basis, concentrating on quality assurance (it forms part of EELQMS -European Engine Lubricants Quality Management System) and maintaining confidentiality amongst Stakeholders.

There is nothing called performance test as such, any test that is executed to validate performance of an application falls under various types of Performance test. Load , Stress, Endurance and Volume tests are some of the types of Performance testing. Load test is the simplest type of all the Performance tests.

### Performance Testing vs Load Testing vs Stress Testing ...

Component tests involve the testing of aggregates on a test bench at defined operating conditions in order to assess their performance, e.g. testing a gearbox on an embracement bench. Part tests include testing of complete parts at defined conditions in order to verify the part's properties, e.g. testing bearings on a bearing test bench.

### Bearing testing methods and strategies - BEARING NEWS

The effect of sampling effort on relative performance between methods in species capture rates can be seen in analyses that used rarified species richness (Nardone 2013). The pattern of relative effectiveness was similar when including studies conducted in urban landscapes only (Fig. 4b). Vane traps had yet to be used prior to this study.
