Piping and Pipeline Calculations Manual: Construction ...

The discussion now moves to those sorts of calculations that occur in piping systems where pipe of different materials has to be welded directly together. When that happens, a differential expansion of the two sections of pipe causes a strain difference. There are two handy ways to make decisions on existing pipe or pipelines.

The B31 piping codes are primarily construction codes for new facilities. They can be used successfully in replacing or extending a piping facility. With few exceptions, notably the pipeline sections, there are no maintenance and ongoing requirements. The pipeline sections have relatively extensive detailed requirements for continuous maintenance.

We use manual (spreadsheet) calculations for pipe span, but never do the manual calculations for other stress. We have a good feel for how big expansions loops need to be and go straight to the computer for stress analysis. There are rules for low risk piping where computer for stress analysis is not required.
