Rene Descartes independently discovered the general formula for amicable numbers. This formula is known as Thabit ibn Qurra's formula, after an Arab mathematician who discovered it several centuries before Descartes.

Rene Descartes | 10 Major Contributions And ...

To speak of René Descartes' contributions to the history of mathematics is to speak of his *La Géométrie* (1637), a short tract included with the anonymously published *Discourse on Method*. In *La Géométrie*, Descartes details a groundbreaking program for geometrical problem-solving—what he refers to as a “geometrical calculus” (*calcul géométrique*)—that rests on a distinctive approach ...

Descartes' Mathematics (Stanford Encyclopedia of Philosophy)

Rene Descartes, French mathematician, scientist, and philosopher who has been called the father of modern philosophy. He was among the first to abandon Scholastic Aristotelianism by formulating the first modern version of mind-body dualism and by applying an original system of methodical doubt.

Rene Descartes | Biography, Philosophy, & Facts | Britannica

Leibniz, Spinoza, and Descartes were all well-versed in mathematics as well as philosophy, and Descartes and Leibniz contributed greatly to science as well. Descartes's *Meditations on First Philosophy* (1641) continues to be a standard text at most university philosophy departments.

René Descartes - Wikipedia

René Descartes was a philosopher whose work, *La Géométrie* (Geometry), includes his application of algebra to geometry from which we now have Cartesian geometry. René Descartes' parents were Joachim Descartes (1563-1640) and Jeanne Brochard (1566-1597).

Download Free Profiles In Mathematics Rene Descartes

Although Rene Descartes is usually recognized as a philosopher, he also published several works on pure mathematics and in scientific fields like optics. Descartes believed in the unity of all knowledge and all field of human study.

A Biographical Profile of Philosopher Rene Descartes

Descartes's rule of signs, in algebra, rule for determining the maximum number of positive real number solutions of a polynomial equation in one variable based on the number of times that the signs of its real number coefficients change when the terms are arranged in the canonical order (from highest power to lowest power). For example, the polynomial $x^5 + x^4 - 2x^3 + x^2 - 1 = 0$...
