First, we need to find the general solution. To do this, we need to integrate both sides to find y : This gives us our general solution. To find the particular solution, we need to apply the initial conditions given to us ($y = 4, x = 0$) and solve for C : After we solve for C , we have the particular solution.

In its simplest form one general is known to be the leader, decides on the time of attack, and must communicate this time to the other general. The problem is to come up with algorithms that the generals can use, including sending messages and processing received messages, that can allow them to correctly conclude:

Two Generals' Problem - Wikipedia

A good way of combatting this problem is to break the task down into smaller, more manageable tasks. For example, rather than putting an entire essay on your agenda, divide up the tasks into smaller, more easily achievable goals: read a chapter of a book and make notes, write the essay plan, write the introduction, and so on.
