The LAN-to-LAN Virtual Private Networks are encrypted connections via Internet that connect geographically distinct networks. These connections are used by companies with offices dispersed territorially and the use of dedicated data communication links would be too expensive.

Questions on Virtual Private Networks - Zeroshell Linux Router
The requirements for this network aren't too complicated - connect customer LAN networks 192.168.1.0/24 and 192.168.5.0/24 via a PPTP tunnel over a provider's network. This is a cheaper alternative to MPLS tunnels, though in fairness it is also a very different technology and somewhat legacy.
