## **Water Erosion And Deposition Note Taking Answers**

Running water:  
erosion, transportation,  
and deposition Erosion  
occurs when overland  
flow moves soil  
particles downslope.  
The rock materials  
carried by erosion is  
the load of the river.  
This load acts as a  
grinding tool helping in  
cutting the bottom and  
sides of the river bed,  
resulting in deepening

Rill erosion refers to the development of

## Access Free Water Erosion And Deposition

small, ephemeral concentrated flow paths which function as both sediment source and sediment delivery systems for erosion on hillslopes. Generally, where water erosion rates on disturbed upland areas are greatest, rills are active. Flow depths in rills are typically of the order of a few centimetres (about an inch) or less and along-channel slopes may ...

# Access Free Water Erosion And Deposition

## **Erosion - Wikipedia**

Moving water is the major cause of erosion that shaped earth's surface. Erosion by water begins with a drop of rain. Some water from the rain is evaporated or soaked up by plants other parts of the rain sinks into the soil. As it starts to rain the force of a raindrop can pick up and loosen soil particles.
