The engine still runs either way, but spark might be more reliable under marginal conditions if you get it right. The simple fix for this is to reverse the two primary wire connections on the ignition coil. Because the output spark is very much higher voltage (20,000v) than the car battery (12v), it doesn't care if the battery polarity is ...

(COP) Coil On Plug Ignition System. With the Coil On Plug Ignition System, each spark plug is ignited by its own coil. That means the (PCM) or (ECM) can control the spark and spark timing on an individual, per-cylinder basis. That gives better control over spark timing for more horsepower, better mileage and fewer emissions.
