...

Based on the astronomical definition, winter begins at the winter solstice, which in 2015 occurred late on December 21, and ends at the March equinox, which in 2016 occurred on March 20.

Based on the meteorological definition, the first day of winter is December 1 and the last day February 29.

2015-16 North American winter - Wikipedia

Since the year has 12 months, each season lasts about three months. However, the dates when the seasons begin and end vary depending on whom you ask. Two methods are most commonly used to define the dates of the seasons: the astronomical definition and the meteorological definition. Astronomical terms & definitions. Astronomical Seasons

Seasons: Meteorological and Astronomical

The summer solstice occurs when the sun is directly over the Tropic of Cancer, which is located at 23.5° latitude North, and runs through Mexico, the Bahamas, Egypt, Saudi Arabia, India, and southern China. For every place north of the Tropic of Cancer, the sun is at its highest point in the sky and this is the longest day of the year.

Astronomical winter is a result of Earth's north pole being tilted its farthest away from the sun, and the sun's light aiming directly at southern latitudes. It begins on December 21-22. Astronomical spring is a result of Earth's north pole tilt moving from its maximum lean away from the sun to one equidistant from the sun, and of the sun's light aiming directly at the equator.
