Mendel's experiments extended beyond the F 2 generation to the F 3 generation, F 4 generation, and so on, but it was the ratio of characteristics in the P, F 1, and F 2 generations that were the most intriguing and became the basis of Mendel's postulates. Figure 8.3 Mendel's process for performing crosses included examining flower color.

The first stage of cellular respiration is glycolysis, which happens in the cytosol of the cytoplasm. Splitting Glucose. The word glycolysis literally means "glucose splitting," which is exactly what happens in this stage. Enzymes split a molecule of glucose into two molecules of pyruvate (also known as pyruvic acid). This occurs in several steps, as summarized in the following diagram.
