Chapter 12: DNA Damage and Repair - Chemistry

A mutation (Section 14.1) is a change in the nucleotide sequence of a short region of a genome (Figure 14.1A). Many mutations are point mutations that replace one nucleotide with another; others involve insertion or deletion of one or a few nucleotides. Mutations result either from errors in DNA replication or from the damaging effects of mutagens, such as chemicals and radiation, which react ...

Mutation, Repair and Recombination - Genomes - NCBI Bookshelf

Finally, point mutations were also identified in additional patients. Notably, no tumour with a deletion or point mutation in WTX contained mutations in any of the other two genes, namely WT1 and β -catenin, known to be involved in Wilms' tumours, which suggests that inactivation of the WTX gene may account for a distinct subset of ...

Gene. In humans, the TP53 gene is located on the short arm of chromosome 17 (17p13.1). The gene spans 20 kb, with a non-coding exon 1 and a very long first intron of 10 kb. The coding sequence contains five regions showing a high degree of conservation in vertebrates, predominantly in exons 2, 5, 6, 7 and 8, but the sequences found in invertebrates show only distant resemblance to mammalian TP53.
