Assessment of Ecological Connectivity of Urban Green ...

The Conefor 2.6 software calculates connectivity indices using the size, coverage and spatial arrangement of PAs while considering species dispersal distance, and 10 km is usually set as the threshold based on observations for the majority of terrestrial vertebrates (Saura et al., 2017). The impact of landscape heterogeneity in and between PAs, such as the resistance to species movement by different land-cover types, is not considered.

Assessing protected area overlaps and performance to ...
