All mammals, except humans and the great apes, like chimpanzees, gorillas, orangutans and gibbons, have tails. Why? A new study published in the preprint server bioRxiv suggests that a small piece of ...

#### Humans Lost Tails due to 'Jumping Genes': Study

A group of researchers from New York have found that the TBXT gene has a mutation that is present in apes and humans, but not in monkeys and may be the result of humans no longer having tails.
