The geometric design of highway includes the principle elements of highway alignment, x-sections and adjacent road side environment. The three dimensional physical location determined through calculation of horizontal and vertical alignment of highway centerline, based on variety of operational considerations results in the geometric design and represent all

Geometric Design of Roads and Highways | Design Criteria ...

The geometric design of highways is that stage of highway design which deals with the dimensions of the road and layout of visible features of the highway. It is majorly concerned with the design of the road elements and does not include pavement design, structural and drainage components.

The geometric design of roads is the branch of highway engineering concerned with the positioning of the physical elements of the roadway according to standards and constraints. The basic objectives in geometric design are to optimize efficiency and safety while minimizing cost and environmental damage. Geometric design also affects an emerging fifth objective called "livability," which is ...
