### **FGDP -- TABLE OF CONTENTS**

This “Fundamentals of Geophysical Data Processing” course is just that; it is an introductory course on fundamentals designed for individuals who work with seismic data. The course participants may be processing geophysicists, seismic interpreters or acquisition specialists.

Fundamentals of Geophysical Data  
Processing (PH 333) (3 credits)

PH 333 is a course in geophysical data processing. It covers the fundamentals of geophysical data processing, including the theory and application of seismic data processing, gravity data processing, and magnetic data processing. The course is designed for students who are interested in geophysics and who have completed PH 331 and PH 332.

Detection and analysis of the geophysical signals forms the core of Geophysical signal processing. The magnetic and gravitational fields emanating from the Earth's interior hold essential information concerning seismic activities and the internal structure.
