# File Type PDF Goal Attainment Scaling In Rehabilitation

Goal attainment scaling is a mathematical technique for quantifying the achievement (or otherwise) of goals set, and it can be used in rehabilitation. Because several different approaches are described in the literature, this article presents a simple practical approach to encourage uniformity in its application.

## **Goal attainment scaling (GAS) in rehabilitation: a ...**

GAS - Goal Attainment Scaling in Rehabilitation GAS is a method of scoring the extent to which patient's individual goals are achieved in the course of intervention. In effect, each patient has their own outcome measure but this is scored in a standardised way as to allow statistical analysis.

## **Goal attainment scaling in the rehabilitation of patients ...**

Goal Attainment Scaling. Another system which is grounded in rehabilitation research is the Goal Attainment Scaling (GAS) by Turner-Stokes. GAS is “a mathematical technique for quantifying the achievement of goals”. GAS describes a process for setting goals and uses a five-point scale to measure if the goal is achieved or not.

## **Goal Setting in Rehabilitation - Physiopedia**

The success of goal setting and goal attainment scaling depends on the formulation of the goals. The method described here is a useful tool to standardize the writing of goals in rehabilitation. It saves time and simplifies the construction of goals that are sufficiently specific to be measurable.
