An Introduction to Stochastic Processes with Applications to Biology, Second Edition presents the basic theory of stochastic processes necessary in understanding and applying stochastic methods to biological problems in areas such as population growth and extinction, drug kinetics, two-species competition and predation, the spread of epidemics, and the genetics of inbreeding. Because of their rich structure, the text focuses on discrete and continuous time Markov chains and continuous time ...

The second mixed raw moment, which is  $E [N (t)N (s)]$ , is called the auto-correlation function of the stochastic process. And the acf for Poisson process with parameter  $\lambda$  is  $E [N (t)N (s)] = \lambda st + \lambda \min\{s, t\}$ ,  $\quad s, t \geq 0$

An introduction to stochastic processes, which are random processes occurring in time or space. They are used to model dynamic relationships involving random events in a wide variety of disciplines including the natural and social sciences, and in financial, managerial and actuarial settings.

stochastic processes. Chapter 4 deals with filtrations, the mathematical notion of information progression in time, and with the associated collection of stochastic processes called martingales. We treat both discrete and continuous time settings, emphasizing the importance of right-continuity of the sample path and filtration in the latter ...
