bacteria. The term Black Death was not used until the late 17th century.

Originating in Asia, it spread west along the trade routes across Europe and arrived on the British Isles from the English province of Gascony. The plague was spread by flea-infected rats, as well as individuals who had been infected on the continent.

Black Death in England - Wikipedia

Plague is an infectious disease caused by the bacterium *Yersinia pestis*. Symptoms include fever, weakness and headache. Usually this begins one to seven days after exposure. In the bubonic form there is also swelling of lymph nodes, while in the septicemic

Access PDF Plague Population And The English Economy 1348 1530 Studies In Economic **Wikipedia**

The Great Plague, lasting from 1665 to 1666, was the last major epidemic of the bubonic plague to occur in England. It happened within the centuries-long Second Pandemic, a period of intermittent bubonic plague epidemics which originated from Central Asia in 1331, the first year of the Black Death,
