The formulas for vertical motion that have time in them are  $y = y_0 \pm v_{y0} t + \frac{1}{2}gt^2$  and  $v_{yf} = \pm v_{y0} + gt$ . The first one is for height and the second one for final velocity. We will use the formula for height and modify it for our situation. The freshman has no initial vertical velocity (he has horizontal velocity but

acceleration. Discuss projectile motion using common vocabulary (such as: launch angle, initial speed, initial height, range, time).

## **Projectile Motion - PhET**

A projectile could begin its projectile motion with a downward velocity. A projectile does not need to be "falling."

## Bookmark File PDF Projectile Motion Answer Key

Answer: ABDEF and possibly G . a. TRUE - Free-falling objects, like projectiles, are objects upon which the only significant force is gravity. b. TRUE - The only force on a projectile is gravity; air resistance must not be present or must not have an influence upon the motion of the projectile.
