Whether carbureted or injected, the fuel system is designed to provide the optimum mixture of air and fuel to the engine under varying conditions. This optimum air/fuel ratio (do not call it the fuel/air ratio!) is called the stoichiometric ratio and in theory is approximately 14.7 parts of air to 1 part gasoline (14.7:1) based on weight, not volume.

Manuals. We carry a selection of Service, Repair and Parts Manuals to keep your outdoor power equipment and small engine running smoothly. These manuals are the same manuals authorized dealers use!

### **Manuals - Jacks Small Engines**

Most 2-stroke engines require that you mix the fuel with a special oil. In most small 2-stroke engines (like those for string-trimmers and chainsaws) the oil is mixed with the gasoline. In larger engines, the fuel is injected into the engine. This oil is required to lubricate the engine. In 4-stroke engines, the lubricating oil is in the crankcase.

### **Small Engine Manuals - Jacks Small Engines**

As the piston returns to top dead center, the exhaust valve closes and the intake valve opens and the 4-stroke engine process repeat. Ever repetition of the cycle requires two full rotations of the crankshaft, while the engine only creates power during one of the four strokes. To keep the machine running, it needs the small engine flywheel.
