Stream ecology is the study of those aquatic species, the way they interrelate, and their interactions with all aspects of these flowing water systems. Streams are home to countless species, some of which we're familiar with, and some less so. The aquatic organisms in streams include fish, of course, but go far beyond that.

### **Stream Ecology - usgs.gov**

Stream Ecosystem Definition A stream is a general term as a small channel of freshwater that contains flowing water. They can be both natural and artificial. Many streams are "offshoots" of larger bodies of water like lakes or rivers.
