Submarine cables, that must comply with IEC Standard 60288, are specifically designed and manufactured to be installed underwater, laid at seabed, taking into account that seabed is rugged and rocky, that there are marine animals, which can damage the cables, and that is mandatory that cables must withstand tsunamis and volcanic activity, as well as trawls used by fishermen, that are more hazardous than the fish itself.

the world's first submarine HVAC cable with XLPE insulation in the late 1960's. In 1997 we launched the HVDC Light concept with extruded DC cables, and in 1999 we qualified a 1 GW cable for 500 kV DC opera-tion. The major part of the world's longest submarine power cable is also produced by ABB. It is the 580 km long NorNed cable between

Design technologies. The purpose of submarine power cables is the transport of electric current at high voltage.The electric core is a concentric assembly of inner conductor, electric insulation and protective layers (resembling the design of a coaxial cable). Modern three-core cables (e.g. for the connection of offshore wind turbines) often carry optical fibers for data transmission or ...
