The transistor is a fundamental building block of modern day electronics. When it was invented, it led to an electronic revolution that ushered in a new era of technology. The transistor radio was one of the first things to be revolutionized from this technology. The size of a radio dramatically dropped by not needing to use vacuum tubes anymore.

Small, TO-92 or TO-98 transistors, depending on their fabrication, can handle between about 100 and 1000mA. A TO-5 package might be rated as high as 5 amps; a TO-220, as high as 25A; and a TO-3, up to 500A. Be sure to choose a substitute transistor with a maximum current rating at least as high as the original.
